PROJECT CONTEXT AND OBJECTIVES

Introduction to the research
A cultural mapping of the Creative Industries Ecosystem in Zimbabwe, with a focus on the urban centres of Harare, Bulawayo and Mutare

British Council and Connected Sahara commissioned research into a holistic understanding of the creative industries

Our Approach

Desktop research: for a broad understanding of written research on Zimbabwean creative industries

Online mapping: to get an overview of who is in the sector and where

Surveys: more in-depth information through approx. 250 comprehensive surveys

Interviews: a deep dive through over 100 in-person interviews across four disciplines, in three cities determined as high growth and able to inform growth trends.

PROJECT CONTEXT AND OBJECTIVES

Our Approach

UNESCO Creative Industries Framework

Desktop research: for a broad understanding of written research on Zimbabwean creative industries

Online mapping: to get an overview of who is in the sector and where

Surveys: more in-depth information through approx. 250 comprehensive surveys

Interviews: a deep dive through over 100 in-person interviews across four disciplines, in three cities determined as high growth and able to inform growth trends.

The research approach was informed by the UNESCO Framework in order to better define the creative industries. Data is gathered from various sources in this report generally spanning between 2009 and 2020.
CREATIVE INDUSTRIES OVERVIEW

Understanding the creative industries
The Creative Industries Globally

An Overview

- 3% of Global GDP
- 29.5M jobs

Africa and the Middle East contribute $58 bn and 2.4 M jobs to the overall count.

Sources: UNESCO Cultural Times Global Map of Cultural and Creative Industries 2015 and CISAC online
Creative industries in Zimbabwe contribute an estimated 6.9% to the GDP of Zimbabwe, with a GDP of $110.7 million. Creative goods imports stand at approximately $110.7 million, while creative goods exports stand at approximately $22.2 million. About 22,000 people are employed in creative industries. The creative industries in Zimbabwe play a significant role in the broader economy, with considerable potential for growth.
MAPPING THE ECOSYSTEM

How the creative industries intersect
In mapping the ecosystem we have identified 9 key players. It is vital that each player understands and plays their specific role within the broader ecosystem to keep it in balance.
Support players: These include Resource Players and Consumer Players. Importantly there is a cross over in that Consumers can be Resource Players. There is also some cross over in certain resource players such as funders and sponsors that play the role of platforms in certain projects. Education and training – particularly tertiary education – remains distanced from the overall ecosystem.

Core players: These are people and entities that are directly involved in creative work. This includes artists, but also editors, producers, curators, studios, hubs etc. Roles overlap significantly within the core players of the sector, with many artists also working in editing and producing, as well as distribution. This does mean they often have direct links to their consumers however, with few “middle men”.

Contextual players include the governmental system and legislative framework in which the creative industries operates. Currently this remains quite distanced from the central ecosystem. The broader Zimbabwean economic context has a very significant impact on the nature of the creative industries and influences support players.

The industry drivers are the energy and connectors between the various players. These energise and synergise actions, processes and flows of production, learning, distribution and resources. These are the less formalised flows across all the players. This includes ideas and innovations, creativity and imagination, entrepreneurs, mentors and peers.
Mapping the Ecosystem

The mapping process considered Players, roles, actions and how these interlink

The mapping pointed to strong overlaps and linkages, but also some disconnections
KEY INDUSTRY DRIVERS

What is driving the industry?
**Hustle economy**

55% of creatives supplement their creative income with other work.

**Digital disruption**

35% of creatives are primarily operating their business online, through social media or websites.

**New markets**

44% of creatives export their work beyond the borders of Zimbabwe, this is 10% higher than 2009.

**Key Industry Drivers and Enablers**

What is making the biggest difference for Creative Industries Businesses?

An entrepreneurial spirit, growing exports of goods and services as well as capitalising on digital capabilities are key growth drivers for the creative industries in Zimbabwe.
The Zimbabwean creative economy is characterised by hustle: agility, resilience and hard work. Creatives are agile in their response to the moving pieces that make up the ecosystem, including currency changes etc. They also learn from each other and share experiences and skills. This style of co-coaching is most agile and responsive to a context of flux.

**Hustle Economy**

**A culture of entrepreneurialism keeps the creative industries going**

55% of creatives are supplementing their income with non-creative work in order to keep doing what they love.

**Co-coaching**

30% of creatives employ at least one other person in their creative work.

**Zimbabwean Entrepreneurs data**
- 84% unregistered
- 62.9% less than 5 years in business
- 84% employ less than 3 people
- Key features: Mentorship and peer learning
- Currency changes mean few keep financial records
- Materials costs are a major challenge

**Zimbabwean Creatives data**
- 62% unregistered
- 60% less than 5 years in business
- 85% employ less than 10 people
- Key features: Mentorship and peer learning
- Currency changes mean few keep financial records
- Materials costs are a major challenge

**Key features**
- Employment & social entrepreneurship
- Mentorship and peer learning
- Currency changes mean few keep financial records
- Materials costs are a major challenge

**Coaching**

**Mentorship and peer learning**

**Currency changes**

**Materials costs**

**Zimbabwean Entrepreneurs data**

- 84% employ less than 3 people
- Key features: Mentorship and peer learning
- Currency changes mean few keep financial records
- Materials costs are a major challenge

**Zimbabwean Creatives data**
- 62% unregistered
- 60% less than 5 years in business
- 85% employ less than 10 people
- Key features: Mentorship and peer learning
- Currency changes mean few keep financial records
- Materials costs are a major challenge

**Key features**
- Employment & social entrepreneurship
- Mentorship and peer learning
- Currency changes mean few keep financial records
- Materials costs are a major challenge

"Cultural production is entrepreneurial... Creation is driven by small businesses or individuals, giving rise to agile and innovative employers."**

**Sources:** *UmbaCreate 2019 Research on The Needs of Startup Entrepreneurs in Zimbabwe. **UNESCO Cultural Times Global Map of Cultural and Creative Industries 2015.*
Digital Disruption

In line with global trends, digital is driving significant change

Digital reach is significantly changing how creative industries function in Zimbabwe, impacting globalising networks, direct contact with buyers and audiences, and higher levels of visibility.

Individuals using digital platforms for business:

- Total Zim mobile use: 76%
- Total Zim web use: 40%
- Total Zim youth web use: 60%

Creatives working in the digital storytelling arena identify original, authentically Zimbabwean content as the biggest disrupter for the future of creative industries.

“Globally creative content powers sales of digital devices. Digital cultural goods are, by far, the biggest revenue source for the digital economy, generating US$668 of B2C sales in 2013 and US$21.7b of advertising revenues for online media and free streaming websites.”

A key industry driver

While Zimbabwe is a net importer of cultural goods, its export markets are growing significantly.

Two major factors that make exports a significant growth area:
1. The Zimbabwean diaspora are a major export market
2. Significant direct marketing and access for exports by creatives themselves, primarily through online platforms

New Markets

Where are we seeing the growth and market expansion potential?

The African continent is Zimbabwe’s primary export partner, with significant growth potential in the African Continental Free Trade Agreement.

- **16%** exports to the United Kingdom
- **10%** exports to the European Union
- **20%** exports to South Africa
- **46%** exports to the rest of the African continent: Botswana, Namibia, Zambia, Mozambique, Nigeria & Kenya

10% more creatives regularly exported their work beyond the borders of Zimbabwe in 2020 than in 2009.

Source: Zimbabwe National Statistics Agency (ZIMSTAT), Culture Fund of Zimbabwe Trust (Culture Fund), 2013
HIGH IMPACT AREAS TO UNLOCK

Barriers to growth in the creative industries
85% of creatives see “Creation of new work (products or services) as the biggest opportunity for business growth”. Creatives know that innovating is the driving force to unlock growth. For the sector this requires some important changes.

<table>
<thead>
<tr>
<th>Unlock Area</th>
<th>Where we are</th>
<th>Where to</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>VALUE CHAIN</strong></td>
<td>The sector currently has limited differentiation and professionalisation of creation, production and distribution elements of the value chain. People play some or all of these roles at the same time.</td>
<td>Professionalisation in the field results in expertise. This enables individuals who know their skills well, to break the rules and innovate.</td>
</tr>
<tr>
<td><strong>COMPETITION</strong></td>
<td>Low production quality, few venues, minimal distribution and audience discernment creation as well as the fear of “being copied” result in reduced collaboration and limited risk appetite for creatives.</td>
<td>Healthy competition and collaboration increases creativity, excitement and attracts greater audiences. This increases the quality of creative practice.</td>
</tr>
<tr>
<td><strong>AUTHENTICITY</strong></td>
<td>Bread and butter issues result in practitioners focusing on what already sells. This means often looking to the tried and tested and rarely looking to one’s own history, background and wealth of creativity as inspiration to try something new.</td>
<td>Authentic creativity drives innovation. Zimbabwean creatives can offer something different that is new to local and international audiences.</td>
</tr>
</tbody>
</table>
HIGH IMPACT AREAS TO UNLOCK 2/3

WHAT ARE THE CHANGE AREAS FOR HIGH IMPACT, AND WHAT CAN WE ENVISION?

While agility, flexibility and newness characterise creative industries, some sustainable foundations need to be in place.

**UNLOCK AREA**  |  **WHERE WE ARE**  |  **WHERE TO**
--- | --- | ---
**PLATFORMS**  |  Platforms and facilities struggle to stay open and effective. These include professional associations, studios, production houses, venues such as theatres and galleries as well as digital sales and sharing platforms.  |  Platforms enable sharing work, collaboration, access and understanding to the sector, and entryways for younger practitioners. They become the centres of excellence and innovation.

**POLICY**  |  As of 2019 Zimbabwe has a relatively strong policy and legislative framework for the creative industries. However there is little trust in the commitment of government to enact it, and recent historical lack in implementing progressive policies.  |  Policy implementation, including of intellectual property regimes and indigenous cultural protections, will impact the creative industries in sustainable ways.

**ART ASSOCIATION MEMBERSHIP**

<table>
<thead>
<tr>
<th>Year</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009</td>
<td>55%</td>
</tr>
<tr>
<td>2020</td>
<td>27%</td>
</tr>
</tbody>
</table>

Arts organisations and individuals struggle to stay afloat beyond 10 years, and increasingly people do not see the value in being part of professional associations. This points to a need to reinvigorate and update the foundations of Creative Industries.

**RESILIENCE**

An environment of resilience is possible with the right infrastructures and foundations for long-term development and steady growth.

**HIGH IMPACT AREAS TO UNLOCK 3/3**

**WHAT ARE THE CHANGE AREAS FOR HIGH IMPACT, AND WHAT CAN WE ENVISION?**

Greater monetisation would distinctly unlock the potential of Zimbabwean creative industries

<table>
<thead>
<tr>
<th>Unlock Area</th>
<th>Where We Are</th>
<th>Where To</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>MARKET</strong></td>
<td>The market is limited for buyers, sponsors and funders within the Zimbabwean context. Individuals have a low median income, and both corporates and government too are limited by low revenues.</td>
<td>Stronger spending by individuals, corporates and the state enables greater stimulus for the creative industries and potential for greater investment in the sector.</td>
</tr>
<tr>
<td><strong>FLUX</strong></td>
<td>Hyper-inflation and government currency changes result in constant changes. This causes constantly fluctuating costs of materials and significant changes in supply chain, currency and banking systems.</td>
<td>Greater stability allows for longer-term forecasting and planning. This enables creatives and investors to make informed decisions about the future.</td>
</tr>
</tbody>
</table>

**Monetisation**

56% of creatives see “Growing a domestic audience/market as one of the biggest opportunities for business growth”.

41% of creatives see “Accessing funding and finance as one of the biggest opportunities for business growth”.

Greater cash flow would unlock the potential of the creative industries.

- **GDP decline between 2000 and 2008**
- **1.5% of household income is spent on creative products**

THE FOUR GROWTH SECTORS

What can we learn from the high functioning areas of the creative industries?
The following four sectors have been identified as high growth areas within the Zimbabwean creative industries through desktop research*. These areas were used as a deep dive into strengths and potential learnings for creative industries in Zimbabwe.

**Visual Arts**

Visual arts refers to disciplines such as painting, sculpture, installation and others. The research also included those operating in the contemporary arts arena and stone sculpture.

**Music**

The research looked at various music genres including Zim Dancehall, Sungura, Urban Grooves, Electronic and others.

**Festivals**

Festivals cut across various disciplines and include music and theatre, but also food and digital content.

**Digital Storytelling**

Digital storytelling refers to content development on online platforms and stretches across film, writing, photography, podcasting and other creative disciplines.

Each sector is assessed on key defining factors. A coloured circle indicates a strength while an empty one means an area is not currently widely active.

**Key Defining Factors**

- High Revenue
- Large Market
- Local Growth
- Global Growth
- Social Impact
- Future Proofing

**The key growth sectors were identified through a combination of revenue, audience numbers, international impacts and disruption capability.**

*Sources and processes for this have been detailed in the desktop study report dated January 2020. This report served as the driver of the project’s methodology and approach.*
"An unexpected post-Mugabe boom has caught the attention of international art collectors. A crazy amount of talent." - Guardian Newspaper UK 2019

1. "People sharpen people’s skills"

NO MORE WORKSHOPS. Visual artists are embracing co-learning, peer-to-peer mentorships and learning from doing. Visual artists have learned through successful artists that one learns the business of art through others; by meeting people, growing networks and getting the lay of the land, especially in contexts that change fast.

2. Capitalising on International Platforms

The Venice Biennale has rocketed ZW visual arts. This has been far more impactful than for other African countries and is attributed to:
1. Consistent presence each year with a strong reputation
2. Introducing one young unknown artist
3. Introducing one historical artist the world doesn’t yet know

This makes the ZW Pavilion internationally reputable for talent!

3. Artists Initiatives

Many young, successful artists set up initiatives that serve as spaces for co-learning. These platforms encourage energy, dynamism and collaboration. These spaces also capitalise on increasing international networks.

**Percentage of artists starting spaces**

- 44% have started an artists initiative
- 45% intend on starting an artists initiative
- 11% working only individually

**Key Defining Factors**

- High Revenue
- Large Market
- Local Growth
- Global Growth
- Social Impact
- Future Proofing
Key Growth Sectors: Music
The music sector has long standing and established strategies

1. Do it Yourself
Technology has made music production very affordable, thereby almost eliminating traditional barriers of entry – backroom production and streaming has made it easier for Zim Dancehall to be accessible and consumed. Zim Dancehall also pioneered the use of ‘Pasa Pasa*’ and public transport distribution. They have been able to bypass traditional forms of marketing and distribution, which have largely faltered, and grow extensively through these innovations.

2. Dual Services
Creatives are working through dual service business models. In this way they produce for their own creative value and also for more commercial value. The Outfit/Ngoma-Ingoma for example differentiates between The Outfit as a band that backs other musicians who pay them, and Ngoma-Ingoma that do their own independent creative work.

3. Authenticity
Innovation within authenticity is Zimbabwean music’s greatest asset. From Sungura to Zim Dancehall, the inclusion of the variety of languages and cultural expressions local to Zimbabwe increases the creative strength and marketability of the music form.

Leading the pack: Zim Dancehall, Sungura and Traditional Contemporary

*highly localised Zim Dancehall parties held in high density suburbs.
**Key Growth Sectors: Festivals**

Festivals are facing significant challenges and finding innovative strategies.

**There are approx. 40 Festivals in Zimbabwe**

**1. Shared Value Sponsorship**

Festivals are increasingly focusing on shared value sponsorship strategies. This is an important trend in private sector sponsorship more broadly. This means joint strategies with sponsors for positive outcomes. An example from Ibumba Festival is using empty glass bottles as tickets for festival access. The sponsor needs the bottles, and it enables wider audiences to access the festival despite financial challenges. Another example is brands oriented toward youth markets increasingly partnering with major youth culture festivals, capitalising on market access through the festival but also providing needed funds to the festival.

**2. Culture Based Urban Revitalisation**

Using culture and creative industries to enable urban change and place-making is a key international trend that the Bulawayo Festival is looking to achieve. The festival is led by Bulawayo City authorities with the full support and coordination of existing festivals in the city which are lending their knowledge and expertise in an ethos of collaboration.

**3. Monetising**

Though festivals draw very large crowds in Zimbabwe, many have struggled to retain annual sustainability. Many festivals currently remain dormant due to lack of funds.

"Many local governments across the world have also recognised how the CCIs can directly and indirectly contribute to place-based revitalisation efforts."

Inter-American Development Bank 2019. Creative and Cultural Industries in Urban Revitalisation
**Key Growth Sectors: Digital Storytelling**

Digital storytelling is an evolving form and is ahead of the curve of future proofing.

**Leading the pack: local content, especially satire, rules the ZW digital arena**

**Developing the skills**

Practitioners are finding ways to connect their conventional physical practice into the digital environment. Learning to take higher quality images of their works, developing online relationships and building customer trust, has enabled some to work alone physically in their studios in Zimbabwe, but connect to a global market of online buyers.

**Localising the Global**

Digital creators are developing community hubs that are localised in townships and other residential suburbs to connect directly to local communities particularly the youth and emerging creatives. These respond to local needs (software, data packages) in order to connect to global practice and keep up with lightning speed changes.

**Relevant to all**

As a cross-cutting sub-sector, digital storytelling applies to or augments all other creative work. More creatives are recognising the need for it to be infused their work.

---

**Data affordability remains a significant challenge for creatives. Monetisation of digital content remains a challenge for digital storytellers.**

---

**Key Defining Factors**

- High Revenue
- Large Market
- Local Growth
- Global Growth
- Social Impact
- Future Proofing
City Specifics

The research was urban focused and looked at three key creative cities.
Professionalisation – in the sense of acting professionally and consistently within the business arena – was expressed to be a key concern about creatives in the sector. The lack of professionalisation was seen to undermine the potential of the sector, especially for externals to take it seriously.

Creatives in Harare also talked about the challenge of a number of art waves stagnating – whether it be certain music forms, or Zimbabwean Stone Sculpture. They expressed the need to remain ever innovating, with the role of collaboration to enable this.

Harare has the most established value chain development across various disciplines. This enables greater professionalisation and greater innovation.
Bulawayo needs more high-quality platforms with interesting programmes and high-profile events that create more visibility – but these should also have a long-term impact and exchange that leaves something behind and remains sustainable.

Bulawayo’s visual arts scene is very curio influenced, particularly by a once strong tourism circuit. This limits innovation.

Bulawayo tends to be a secondary city to Harare in terms of arts activity and perceived funding access. However this can be to its advantage. For some, it is seem as less “discovered” and therefore is a place where it’s possible to “discover gold”.

Artists who are able to build broad networks beyond Bulawayo also find it easier to work there due to lower living costs than Harare.

Bulawayo has much more cross-organisational and governmental collaboration than other Zimbabwean cities resulting in new innovations and increasing energy.

**MAIN STRENGTH**

**CHARACTERISTICS**

The celebration of Bulawayo Day and the hosting of the Bulawayo Arts Festival aims to enable local people and our global visitors to participate meaningfully in the cultural life of the city, and it provides an opportunity for Bulawayo to showcase its proud heritage, rich diversity, creative nature, resilience and majesty.”

**BULAWAYO CITY COUNCIL OFFICIAL STATEMENT**

**NEEDS**
Mutare needs support to better facilitate its incubation like nature. The raw talent and energy can be better facilitated for greater growth, development and professionalisation. There is also great potential for Mutare to attract emerging practitioners from other parts of the country as it develops itself as a supportive and open space for young creatives.

Mutare is a space to find one’s creative voice away from the pressures of the big city. This results in significant creativity, exploration and experimentation, with a Can Do attitude.
VOICES OF CREATIVES
Creatives on what works
**Voices of Creatives**

**What are the innovative trends emerging from the sector?**

Zimbabwean creatives know better than anyone, what they need and how innovation can happen in the sector.

**Artists reinvesting**

From Village Unhu, to Animal Farm to Mbare Art Space, contemporary artists making it big in Europe and the USA are reinvesting back into Zimbabwe by creating their own spaces – hubs for collaboration, coworking and learning.

These spaces offer a place to work, and access to other artists to chat to and get input from. Some of these spaces provide equipment and internet access, while others even serve as a route through which to access market platforms locally and internationally.
Voices of creatives

What are the innovative trends emerging from the sector?
Zimbabwean creatives know better than anyone, what they need and how innovation can happen in the sector.

What policy can do

The inclusion of the 75% local content legislation in 2000 and 2003 is credited by many creatives with enabling more airplay for Zim Dancehall. Expansion of broadcasting licences due to the same act, sparked a wider range of radio stations with various target markets which also enabled a burgeoning of Zim Dancehall. Today Zim Dancehall is arguably the biggest music genre in Zimbabwe. This points to the significant potential for strong policy change to positively impact the creative industries.
**Voices of Creatives**

**What are the innovative trends emerging from the sector?**

Zimbabwean creatives know better than anyone, what they need and how innovation can happen in the sector.

---

**Intersecting Industries**

More creatives are recognising that the creative industries and other industries’ growth is interdependent. Tourism is one such industry that many creatives do business with. For some creatives there is increasing interest in directly enabling the creative industries through enabling the tourism sector – and as such they are using their creative energies towards this. Digital storytellers in particular have the potential to apply their cross-cutting skills. The Wasu, for example, is committed to tourism in Manicaland and is creating content, developing cultural tourism programmes and looking at the potential for festivals to increase tourists.
RECOMMENDATIONS

What have we learned about what to do next?
**ECOSYSTEM DYNAMICS & BEST PRACTICE**
- Scaling up, enhancing and making easier, what is already working
- Working with the strengths and limitations of the ecosystem
- Phasing and emergence for smaller changes to have bigger knock-on effects

**LOW RESOURCE - HIGH IMPACT ACTIONS**
- Working within the limitations of current economic circumstances
- ‘Low hanging fruit’ that is achievable and scalable
- Learning from creatives because their working solutions are efficient and precise

**CURRENT POLICY ENVIRONMENT**
- Arts and Culture Policy and Strategic Plan
- Impacts of previous policy changes on creative industries (e.g. 75% local)
- Zimbabwe is Open for Business Strategy

**RECOMMENDATIONS**

Our recommendations and action points are based on:

- Most importantly: One size does not fit all and everything is always changing. Tailored responses need to remain agile!
